

MMR

What is it?

The MMR vaccine protects against three different viruses; measles, mumps and rubella. The measles virus, specifically, causes fever, cough, full body rash and risk of health complications.

What happens if my child does not get it?

The measles virus is extremely contagious and can lead to many things, including seizures, ear infections, pneumonia, swelling of the brain, and even death.

When does my child get it?

Two doses total at 12-15 months and 4-6 years.

**AS ALWAYS, TALK TO YOUR
CHILD'S PEDIATRICIAN IF
YOU HAVE ANY QUESTIONS**
